

Project 1 Proposal

Project Title

Analyzing Inflation Trends Using FRED Data ([Github link](#))

Team Members

Jackson Popelka, Leo Wheeler, Kimarlee Tran, Jacob Brown, Liliana Guevara-Guerrero

Outline

The aim of our project is to search for patterns in the CPI for 3 foodstuffs categories: dairy, meats, and fruits and vegetables. We want to get a general understanding of the data over the last 5 years in these categories and see if any patterns emerge.

Dataset to Be Used

FRED (Federal Reserve Economic Data)

Research Questions to Answer

This study aims to understand the following questions:

- Which (if any) of these groups have been subject to higher inflation, and which groups may be avoiding it.
- Compare the inflation trends over the past 5 years to other time periods and explore for differences.
- What patterns are prevalent among each food category?
- What are the factors that possibly influenced trends in the data during the 5-year timeframe?

Rough Breakdown of Tasks

- Observe inflation trends based on CPI
- Analyze inflation data for trends
- Determine methodology to compare trends
- Develop visualizations of the data to support analysis
- Create a time series analysis of the data over the last 5 years
- Identify potential correlations in the data
